

What IS a bump cap?

Personal Protection Equipment at Work Regulations requires that **Head Protection** be used in hazardous areas. A full assessment of the hazards must be undertaken to determine the suitability of Head Protection supplied.

Bump Caps can be worn when there is a need to protect against accidental minor bumping of the head (e.g. Overhead fixed obstacles). These lightweight bump caps provide head protection from bumps, bruises, lacerations and scrapes in low clearance areas. They are perfect for areas where head protection against falling objects isn't necessary and a safety helmet isn't required.

Although there is no legislation governing the expected lifespan of bump caps, it is strongly recommended that they be replaced at least every two years. Excessive wear and tear can drastically reduce this period. Bump caps that have been abused, cut or scratched should be discarded immediately. The cost of new **head protection** is far less than the cost of compensation for injury or for an employee who may pay with their life because of inadequate protection.

A bump cap is light and comfortable for extended wear.

What IS NOT a bump cap?

Bum cap **IS NOT** a safety helmet. Safety Helmets (approved to EN397) must be used when there is a danger of falling objects, where extreme danger is concerned.

Specifications:

- Protects head from sweating and provides comfort by air circulation via air ventilation holes and the sweat band provided.
- Thanks to the Velcro closure at the back of the cap, it can be adjusted to suitably fit to the user's head.
- A thick sponge is used inside the shell to absorb the possible shock to the head.

Application areas:

Logistics, decorations, warehouses with overhead stocking, municipality & police departments, landscaping & garden work, maintenance & repair, railways, shipyards, airports, automotive, food & beverage processing, cargo transportation, petrol stations, promotional activities and many other unmentioned areas, where there is an accidental minor bumping of the head is likely to happen.
